

Call Center Medication PROGRAM

The Medication Program is designed to remind individuals to take their medication. Reminders can be provided as often as needed in a variety of ways, such as a telephone call, text message, email, or webcam. Forgetting to take prescribed medications can result in increased health concerns that may lead to hospitalization. This cost-effective program will help you, your loved ones, or friends prevent emergency situations as a result from not taking medications as prescribed.

The following support services are available through the medication reminder program:

- 24/7 Live Call Answering by skilled professionals via telephone or video camera.
- Scheduled medication reminders via telephone or video camera to prevent missed medication and ensure well being.
- Service plans outlining instructions that are catered to the individual regarding when family or care systems are to be alerted.

Other services available as needed.
